

# Stray animal information sharing platform

## Group members:

Youlin Chen  
Chunzhi Li  
Siyan Liu  
Yetong Chen  
Wei Guo

The platform allows users to post information about stray animals and view other users' posts to help the animals.

## Core features:

1. Animals Information: Allow users to browse all stray animals (sorted by posting time and showing on a map).
2. Volunteer Information: Allow users to view volunteer information posted by other users, such as the location of animal hospitals that volunteer to help stray animals.
3. Personal Center:
  - a) Post animal page: Allow users to publish an animal page.
  - b) Edit animal page: Allow users to edit the content of their postings or mark the animal as found or adopted.
  - c) Following animals: Allow users to find the animals they previously followed.
  - d) Post Volunteer Information page: Allow users to publish a Volunteer Information page.
  - e) Edit Volunteer Information page: Allow users to edit the content of their postings.
  - f) My posts: Allow users to view the animals and the Volunteer Information that they posted.
4. Animal page:
  - a) Include the photos, the found time and address, the species, and other information about the animals.
  - b) Comment: Allow users to post comments on the animal page.
  - c) Follow: Allow users to follow the animals.
  - d) Adoption application: Allow users to fill out the application form.
5. Volunteer Information page: Include the organization or person helping, what assistance to provide, and the address or contact information.

## Extra features:

1. Integration with Google Maps to show the addresses where the animals are found
2. Search function: Allow users to search animals by species
3. Responsive layout
